INTRODUCTION

Utah Emergency Department Encounter Database

Administrative Rule R426-1-7 (I) mandates all Utah licensed hospitals to report information on emergency department patient encounters. The rule defines the data elements which hospitals are required to submit to the Bureau of Emergency Medical Services under statute and administrative rules specifically for the purpose of constructing a statewide Emergency Department Encounter Database. The database contains the consolidated information on complete billing, medical codes, personal characteristics describing a patient, services received, and charges billed for each patient emergency department (ED) encounter. The ED Encounter Public Data Set includes the combined data on all ED outpatient visits and ED inpatient admissions. A new field Encounter Type with values of 'o' and 'i' has been added to the record layout starting in 1999. Caution should be used when comparing this data with previous years as they only included ED outpatient visits.

Forty eligible hospitals submitted data in every calendar quarter (3-month period) in 2008. **DRG and APR-DRG (v. 20.0) fields including patient severity subclass and risk of mortality have been added starting in 2005. Because of the dramatic change moving from DRG (V24) to MS-DRG (V25) which went into effect on 10/1/2007, we are including both fields as separate data elements ran across the entire year for 2008.**

Public-Use Data Files (PDF)

Public-Use Data Files are designed to provide general health care information to a wide spectrum of users with minimal controls. The Director of the Bureau of Emergency Medical Services or the Director of the Office of Health Care Statistics can approve a request for a PDF without further review.

Two different public data files are available for 2008 Emergency Department Encounter Data (see page 4 for data elements and file descriptions).

Data Processing and Quality

Data submission: The Office of Health Care Statistics provides data element definitions to ensure all hospitals will report similar data. The Bureau of Emergency Medical Services/Office of Health care Statistics receives quarterly Emergency Department Encounter Data from hospitals in various formats and media. The data are converted into a standardized format.

System Edits: The data are validated through a process of automated editing and report verification. Each record is subjected to a series of edits that check for accuracy, consistency, completeness, and conformity with the definitions specified in the Utah Hospital Emergency Patient Encounter Data Submittal Manual. Records failing the edit check are returned to the data supplier for correction or comment.

Hospital Reviews: Each hospital is provided with a 35-day review period to validate the compiled data against their hospital records. Any inconsistencies discovered by the hospitals are reevaluated or corrected.

Missing Values: When dealing with unknown values, it is important to distinguish between systematic omission by hospitals, i.e., reporting exemption granted for particular data elements, coding problems that deemed the entire data from the hospital as unusable; and non-systematic omission, i.e., coding problems, invalid codes, etc. While systematic omission creates potential bias, non-systematic omission is assumed to occur randomly. The user is advised to examine missing values by hospitals for each data element to be used.

Patient Confidentiality

The Committee has taken considerable efforts to ensure that no individual patient could be identified from the PDF. Patient's age and payers are grouped. The data elements for the following specific conditions are concealed by coding them at the state level: (1) Utah zip codes where there are less than 30 ED encounters per year are coded as the county abbreviation, and out-of-state zip codes where there are less than 30 ED encounters are coded as the state abbreviation, (2) age groups, sex and zip code are encrypted as 66, E, and -6666, respectively, if the patient's Major Diagnosis Code (MDC) is 25 "Human Immunodeficiency Virus Infection" or if the Diagnosis Related Group (DRG) is 433, 521-523 "Alcohol/Drug Abuse or Dependence".

Agreement to Protect Patient Confidentiality

The data collected by the Utah Department of Health may be used only for the purpose of health statistical reporting and analysis or as specified in the user's written request for the data. Any effort to determine the identity of any reported case or any attempt to link this data set with individually identifiable records is prohibited.

Uses of Emergency Department Data

The PDF includes data on charges and length of stay in hours (LOSH). Several factors affect the comparability of charge and LOSH across hospitals, such as case-mix and severity complexity, payer-mix, market areas and hospital ownership, affiliation or teaching status. Any analysis of charge or LOSH at the hospital level should consider the above factors.

Data Format

Fixed ASCII is the standard format for the public data file, on a CD-ROM. Requests for other formats, such as a SAS Dataset, will be considered.

DRG, MS-DRG and APR-DRG Classification:

The DRG, MS-DRG and APR-DRG fields in the data were generated using:

3M Core Grouping Software for Windows (Version 10.3.2). Wallingford CT, 3M Health Information Systems, October 2008.

Specifically, for the APR-DRG, and for the 2008 data, the Core Grouping Software executed the following module:

APR-DRG Grouper(Versions 25.0 & 26.0), Wallingford CT, 3M Health Information Systems, October 2007 & October 2008.

The DRG is the original HCFA defined DRG. For all of the 2008 data, the Core Grouping Software generated this using the following module:
CMS Grouper(Version 24.0), Wallingford CT, 3M Information Systems, October 2006.

The MS-DRG is the new HCFA defined DRG starting with V25.0. For all of the 2008 data, the Core Grouping Software generated this using the following modules:

CMS Grouper(Version 25.0 & 26.0), Wallingford CT, 3M Information Systems, October 2007 and October 2008.

Redistribution

User shall not redistribute the Utah Emergency Department Encounter Data File in its original format. User shall not redistribute any data products derived from the file without written permission from the Bureau of Emergency Medical Services or Office of Health Care Statistics, Utah Department of Health.

*Change made in DRG classification. Hospitals provided the Office of Health Care Statistics (OHCS) with ICD-9-CM codes, rather than DRGs, so there was no need for the hospitals to be aware of DRG changes. The DRG was assigned by OHCS using 3M software (reference given on page 3) which classified the hospital discharge into a DRG based on the ICD-9-CM codes and other data such as age. OHCS accounted for DRG changes by using the DRG definitions which applied to the date of hospital discharge.

*Patients having heart, liver, lung, simultaneous pancreas/kidney, pancreas, or bone marrow transplants, or tracheostomies, traditionally categorized as PRE MDC (0), are assigned by the DRG Grouper into the following DRGs independent of the MDC of the principal diagnosis: 476, 477, 480-483, 495, 512, 513. DRGs (468,469,470) associated with all MDCs are assigned independent of the MDC of the principal diagnosis if the diagnosis is valid. Otherwise, this is the traditional Health Care Financing Administration (HCFA) MDC.

*Patients having heart, liver, lung, simultaneous pancreas/kidney, pancreas, or bone marrow transplants, or tracheostomies, traditionally categorized as PRE MDC (0), are assigned by the DRG Grouper into the following MS-DRGs independent of the MDC of the principal diagnosis: 001-013, 984-989. MS-DRGs (981-983, 998, 999) associated with all MDCs are assigned independent of the MDC of the principal diagnosis if the diagnosis is valid. Otherwise, this is the traditional Health Care Financing Administration (HCFA) MDC.
